Experimental Design and Making Connections Study Guide

-Science begins with a question. In the experiment below, the question is.... Can fertilizer X make the plant grow higher than without fertilizer X?

Designing and Experiment: Example Scenario & Vocabulary:

EX: A student wants to test if fertilizer X makes a plant grow higher. The student sets up two plants in a room of the same species, same original size, same sunlight exposure, and same amount of water. One plant receives fertilizer X, the other plant receives no fertilizer. The height of the plants is measured once per week.

Hypothesis - Educated guess of what the person conducting the experiment expects to happen. In this example, the hypothesis is.... If a plant receives fertilizer X, then it will grow higher.

Independent Variable – The one factor that is NOT the same for both. In this example, the independent variable is fertilizer X. We are testing to see if the fertilizer works.

Experimental Group - The setup that is exposed to the independent variable. In this example, the plant receiving fertilizer X.

Control Group- The group not receiving the independent variable. In this example, the plant that is not receiving the fertilizer is the control.

Dependent Variable - The result of the experiment or change that occurs. In this example, the height of the plants.
