- Vector- An organism, such as an insect, that transmits a pathogen from one host to another.
- Vector-borne diseases - Diseases that are transmitted between hosts by a vector organism such as a mosquito or tick (e.g., malaria, dengue fever, leishmaniasis).
- Vectorial capacity - The average number of potentially infective bites of all vectors feeding upon one host in one day, or, the number of new inoculations with a vector-borne disease transmitted by one vector species from one infective host in one day.
- Climate change may affect the transmission of infectious diseases that are transmitted
- via an insect or tick vector. The disease pathogen is transmitted in the bite of
- the blood-sucking vector. In the case of malaria, the vector is a female Anopheles
- mosquito. Vector organisms are cold blooded and therefore sensitive to the local
- weather conditions. There is a minimum temperature (threshold) for activity,
- below which it is too cold for the vector to feed. At higher temperatures, the
- pathogen develops more quickly inside the vector and therefore the chance of an
- infective bite increases. Many factors other than climate are important determinants
- for the distribution of vector-borne diseases. Diseases such as malaria
- have been eradicated from many countries where the climate is suitable for transmission.
- Assessing the impact of changes in climate in the future need to take into
- account the capacity of countries to control the disease.

Vector-borne diseases: Epidemiology

Table 13.1 Vecoor-borne diseases sensitive to climate factors

Vector	Diseases
Mosquitoes	Malaria, filariasis, dengue fever, yellow fever, West Nile fever
Sandflies	Leishmaniasis
Triatomines	Chagas' disease
Ixodes ticks	Lyme disease, tick-borne encephalitis
Tsetse flies	African trypanosomiasis
Blackflies	Onchocerciasis

Protozoa, bacteria and viruses transmitted by biting insects are among the most important causes of ill-health in low- and middle-income countries (Table 13.1). Many important tropical diseases are transmitted by mosquitoes. Malaria is the world's most important vector-borne disease. The World Health Organization (WHO) estimates that about 2400 million people are at risk of infection with malaria (approximately 40 per cent of the world's population). Malaria is currently endemic in over 90 countries (WHO

Chapter 13 Climate Change Self Test

Judd E. Hollander

Chapter 13 Climate Change Self Test:

Thank you unconditionally much for downloading **Chapter 13 Climate Change Self Test**.Maybe you have knowledge that, people have look numerous period for their favorite books later than this Chapter 13 Climate Change Self Test, but end up in harmful downloads.

Rather than enjoying a good book past a mug of coffee in the afternoon, on the other hand they juggled like some harmful virus inside their computer. **Chapter 13 Climate Change Self Test** is within reach in our digital library an online access to it is set as public suitably you can download it instantly. Our digital library saves in complex countries, allowing you to get the most less latency era to download any of our books behind this one. Merely said, the Chapter 13 Climate Change Self Test is universally compatible subsequently any devices to read.
