

Chapter 2: Microevolution: The Origin of Species (1859)

Knowledge: ability of gene flow from those individuals at birth to the gene pool of a population
2000 students (10%) of the population for building an organism

Evolutionary Biology of Microevolution: Population Genetics

2000 - 10000 - 100000

Genes of individuals in a population

Individuals in a population

Individuals contribute to the gene pool of a population

Alleles: individual heritable forms of the same gene

Genotype: the set of genes an individual carries

(How allele change over time)

Phenotype: observable form of an organism

Phenotype change through the life of an organism as its genes interact with the environment

Phenotype is determined by the genotype as it interacts with the environment

Genotype refers to genes and the environment affects how they're expressed (phenotype)

Genotype refers to genes and the environment affects how they're expressed

(e.g. study the effect of environment on genes)

All populations phenotype can be caused by some DNA and genotype

AA, Heterozygous genotype

Aa, Heterozygous genotype

aa, Homozygous genotype

Hardy-Weinberg's hypothesis: no genotype frequencies in a population or changed frequency
allele

Are conditions that would not have occurred in nature?

Selection is the force that causes fitness to appear, such as the red color of the flower

Reproductive Genetics, Gender and the Body Elizabeth Ettorre, 2013-04-15 This book is all about reproductive genetics a sociological concept developed to define the use of DNA based technologies in the medical management and supervision of reproduction and pregnant women In a searching analysis Elizabeth Ettorre uncovers the hidden social processes involved in the development of these technologies Focussing on prenatal screening she explores how the key concepts of gender and the body are intertwined with the process of building genetic knowledge and some of the unintended consequences for women These include the injection of biology into social relationships and the development of a gendered discourse of shame and stigmatisation in which the perfect body becomes idealised and new conceptions of disability are shaped It becomes clear that the modernist tradition of scientific disinterestedness is being replaced by a new ethic the making of moral judgements by scientists *Reproductive Genetics Gender and the Body* draws on interviews with European medical legal and nursing professionals and raises important issues around the gendered female body the site of genetic capital It challenges professional and scholar alike to grapple with and think through their responsibilities in this complex field where the competing issues have yet to be resolved

Biology: How Life Works James Morris, Daniel Hartl, Andrew Knoll, Robert Lue, Melissa Michael, Andrew Berry, Andrew Biewener, Brian Farrell, N. Michele Holbrook, Jean Heitz, 2019-02-05 *BIOLOGY HOW LIFE WORKS* has been a revolutionary force for both instructors and students in the majors biology course It was the first truly comprehensive set of integrated tools for introductory biology seamlessly incorporating powerful text media and assessment to create the best pedagogical experience for students *THE VISUAL PROGRAM* The already impressive visual program has been greatly improved and expanded The powerful Visual Synthesis tools have been reimaged allowing for more flexibility for both students and instructors A new Tour Mode allows for learning objective driven tours of the material and deep linking from the eText allow the student to jump straight from the text into a rich visual representation of the content Instructors can also create customized tours to use for engaging in class presentations And finally new animations have been added to the library including a new 3D animation to support the animal
