Symmetry Properties of Molecules G. S. Ezra,2012-12-06 The aim of the present article is to give a critical exposition of the theory of the symmetry properties of rigid and nonrigid molecules Despite the fact that several accounts of the subject both technical and didactic are now available and despite the extensive discussion of nonrigid molecule symmetry that has been going on since the classic papers of Hougen and Longuet Higgins there remains a need for a unifying survey of the problem Previous treatments have tended to emphasize one or the other particular viewpoint at the expense of a broader view Renewed interest in the details of the symmetry classification of rotation vibration states of highly symmetric octahedral

molecules has led to a reexamination of the relation between conventional point group operations and permutations of identical nuclei in rigid molecules together with a clarification of the fundamental role of the Eckart constraints and associated Eckart frame. As is shown below analogous insights can also be obtained in the case of nonrigid molecule symmetry where the Eckart-Sayvetz conditions provide a natural generalization of the Eckart constraints. The importance of particular definitions of the molecule-fixed frame in the theory of molecular symmetry can be better appreciated by examining their dynamical origin. Chapter 1 is therefore devoted to a description of the derivation of the usual Wilson-Howard-Watson form of the molecular Hamiltonian together with its generalization to nonrigid molecules. Particular attention is given to the introduction of molecular models and use of the Eckart and Eckart-Sayvetz constraints.

Chemical Induction of Cancer: Structural Bases and Biological Mechanisms. Volume I discusses the role of chemicals in the genesis of cancer in man. This book is organized into two parts encompassing four chapters that also present the concepts and techniques of testing chemicals for carcinogenic potential. After an introduction to the distinctions between normal and neoplastic cells, this book goes on describing the structure of potential carcinogens including alkanes, alkenes, alkynes, and aromatic hydrocarbons. The next chapter deals with the role of intra and intermolecular forces of chemicals in their carcinogenic activity. The last chapter discusses some aspects of the pathology of chemically induced tumors. This chapter also provides the concept and testing procedures of animal assays. This book is of great value to oncologists, pathologists, and general medical practitioners.
