Systems Immunology and Translational Research in Infectious Diseases Mariana Araújo-Pereira,Bruno Bezerril Andrade,Artur Trancoso Lopo De Queiroz,Caian Vinhaes,Tiago Feitosa Mota,2026-02-13 The field of systems immunology and translational research in

infectious diseases has seen significant advancements due to the rapid development of omics technologies and systems biology. These advancements have enabled a more comprehensive understanding of the complex interactions within the immune system and their influence on disease progression and treatment outcomes. Despite these advancements, there remain critical gaps in our understanding of how these interactions can be leveraged to predict disease susceptibility, course, and response to treatment. Recent studies have highlighted the potential of genomic sequencing to identify genetic variations in both pathogens and hosts that affect disease dynamics. However, the integration of proteomic and metabolomic profiling with clinical and environmental data through computational tools and artificial intelligence is still in its nascent stages. This integration is crucial for modeling disease behaviors and treatment scenarios, yet it requires further exploration to fully realize its potential in revolutionizing the management of infectious diseases.

This research topic aims to explore the convergence of systems immunology, genomics, proteomics, and metabolomics with translational research to enhance our understanding and management of infectious diseases. The main objectives include uncovering new biomarkers and molecular pathways that can predict disease susceptibility, course, and response to treatment. Additionally, the research seeks to apply genomic sequencing to identify pathogen and host genetic variations, utilize proteomic and metabolomic profiling to understand host response mechanisms, and integrate this information with clinical and environmental data to model disease behaviors and treatment scenarios. Ultimately, the goal is to tailor prevention, diagnostic, and therapeutic strategies to individual patient profiles, thereby advancing precision medicine in infectious disease management.

To gather further insights in the broad yet focused scope of systems immunology and translational research in infectious diseases, we welcome articles addressing but not limited to the following themes:

- Advances in infectious disease diagnostics through integrated clinical data and systems immunology.
- Application of precision medicine principles to public health by predicting disease outbreaks and tailoring interventions to populations based on immunological, genetic, environmental, and social factors.
- Development of personalized therapeutics using insights from systems immunology.
- Integration of omics data with computational tools and AI to model disease behaviors and treatment scenarios.
- Identification of new biomarkers and molecular pathways influencing disease progression and treatment outcomes.

Oxidants and Redox Signaling in Inflammation Gabor Csanyi, Rikard Holmdahl, 2019-07-10

During the last two decades, our view of the role of reactive oxygen species (ROS) in inflammatory processes has changed dramatically. ROS, which are constantly produced at lower levels by living cells metabolizing oxygen, contribute to normal cellular function and tissue homeostasis. ROS are produced at higher levels in inflammation and regulate the inflammatory response in specific ways. The role of ROS in inflammation is complex and primarily determined by their relative amount, chemical properties, reactivity, subcellular localization, and molecular environment. Specificity for their biological targets and availability, and mechanisms of antioxidant defense systems. This eBook comprises twelve reviews and original articles that provide new findings on the role of ROS in the regulation of inflammatory processes, highlighting emerging

topics in redox signaling describe new ROS detection techniques and discuss alternative therapeutic strategies to treat inflammatory disorders The editorial that precedes the published articles briefly summarizes the main findings of each research paper We hope that this collection of research articles contribute to a better understanding of ROS in inflammation
