Read the passage below. Notice that the sentences are numbered. Answer the questions that follow.

<sup>1</sup> All living things are able to pass on their characteristics (traits) to their offspring because the genes that determine their characteristics are passed on from parent to offspring each generation. <sup>2</sup> **Genes** are sets of inherited instructions for making proteins that are coded in a molecule called deoxyribonucleic acid (DNA). <sup>3</sup> The passing of traits from parents to offspring is called heredity. <sup>4</sup> Heredity is the reason children tend to resemble their parents. <sup>5</sup> Sometimes damage causes genes to change. <sup>6</sup> A change in the DNA of a gene is called a **mutation**. <sup>7</sup> Mutations in sex cells (eggs and sperm) are passed on to other generations. <sup>8</sup> Mutations in body cells are not, but they may disrupt the control of cell reproduction, producing cancer.
