Friction

1. A crate filled with delicious junk food rests on a horizontal floor. Only gravity and the support force of the floor act on it, as shown by the vectors for weight W and normal force n .
 - a. The net force on the crate is **(zero)** (greater than zero).
 - b. Evidence for this is **no acceleration**.

2. A slight pull P is exerted on the crate, not enough to move it.
 - a. The force of friction f acting on the crate is (less than) **(equal to)** (greater than) P .
 - b. The net force on the crate is **(zero)** (greater than zero).

3. Pull P is increased until the crate begins to move. It is pulled so that it moves with constant velocity across the floor.
 - a. Friction f is (less than) **(equal to)** (greater than) P .
 - b. Constant velocity means acceleration is **(zero)** (greater than zero).
 - c. The net force on the crate is (less than) **(equal to)** (greater than) zero.

4. Pull P is further increased and is now greater than friction f .
 - a. The net force on the crate is (less than) (equal to) **(greater than)** zero.
 - b. The net force acts toward the right, so acceleration acts toward the (left) **(right)**.

5. If the pulling force P is 150 N and the crate doesn't move, what is the magnitude of f ? 150 N
6. If the pulling force P is 200 N and the crate doesn't move, what is the magnitude of f ? 200 N
7. If the force of sliding friction is 250 N, what force is necessary to keep the crate sliding at constant velocity? 250 N
8. If the mass of the crate is 50 kg and sliding friction is 250 N, what is the acceleration of the crate when the pulling force is 250 N? 0 m/s² 300 N? 1 m/s² 500 N? 5 m/s²

Answers To Physics Conceptional:

Responses to Naturalism Paul Giladi, 2019-07-25 This volume offers critical responses to philosophical naturalism from the perspectives of four different yet fundamentally interconnected philosophical traditions Kantian idealism Hegelian idealism British idealism and American pragmatism In bringing these rich perspectives into conversation with each other the book illuminates the distinctive set of metaphilosophical assumptions underpinning each tradition s conception of the relationship between the human and natural sciences The individual essays investigate the affinities and the divergences between Kant Hegel Collingwood and the American pragmatists in their responses to philosophical naturalism The ultimate aim of *Responses to Naturalism* is to help us understand how human beings can be committed to the idea of scientific progress without renouncing their humanistic explanations of the world It will appeal to scholars interested in the role idealist and pragmatist perspectives play in contemporary debates about naturalism *An Attempt Towards a Chemical Conception of the Ether* by Professor D. Mendeléeff Dmitry Ivanovich Mendeleev, 1904 **Instructor's Manual [to Accompany] Conceptual Physics, Eighth Ed** Paul G. Hewitt, 1998 *Conceptual Physics Tenth Edition* helps readers connect physics to their everyday experiences and the world around them with additional help on solving more mathematical problems Hewitt s text is famous for engaging readers with analogies and imagery from real world situations that build a strong conceptual understanding of physical principles ranging from classical mechanics to modern physics With this strong foundation readers are better equipped to understand the equations and formulas of physics and motivated to explore the thought provoking exercises and fun projects in each chapter Included in the package is the workbook *Mechanics Properties of Matter Heat Sound Electricity and Magnetism Light Atomic and Nuclear Physics Relativity* For all readers interested in conceptual physics *Conceptual Change and the Philosophy of Science* David J. Stump, 2015-05-15 In this book David Stump traces alternative conceptions of the a priori in the philosophy of science and defends a unique position in the current debates over conceptual change and the constitutive elements in science Stump emphasizes the unique epistemological status of the constitutive elements of scientific theories constitutive elements being the necessary preconditions that must be assumed in order to conduct a particular scientific inquiry These constitutive elements such as logic mathematics and even some fundamental laws of nature were once taken to be a priori knowledge but can change thus leading to a dynamic or relative a priori Stump critically examines developments in thinking about constitutive elements in science as a priori knowledge from Kant s fixed and absolute a priori to Quine s holistic empiricism By examining the relationship between conceptual change and the epistemological status of constitutive elements in science Stump puts forward an argument that scientific revolutions can be explained and relativism can be avoided without resorting to universals or absolutes **The Physicist's Conception of Nature** Jagdish Mehra, 2012-12-06 The fundamental conceptions of twentieth century physics have profoundly influenced almost every field of modern thought and activity Quantum Theory Relativity and the modern

ideas on the Structure of Matter have contributed to a deeper understanding of Nature and they will probably rank in history among the greatest intellectual achievements of all time The purpose of our symposium was to review in historical perspective the current horizons of the major conceptual structures of the physics of this century Professors Abdus Salam and Hendrik Casimir in their remarks at the opening of the symposium have referred to its origin and planning Our original plan was to hold a two week symposium on the different aspects of five principal themes 1 Space Time and Geometry including the structure of the universe and the theory of gravitation 2 Quantum Theory including the development of quantum mechanics and quantum field theory 3 Statistical Description of Nature including the discussion of equilibrium and non equilibrium phenomena and the application of these ideas to the evolution of biological structure 4 The Structure of Matter including the discussion in a unified perspective of atoms molecules nuclei elementary particles and the physics of condensed matter and finally 5 Physical Description and Epistemology including the distinction between classical and quantum descriptions and the epistemological and philosophical problems raised by them
