## **Introduction**

'Dowry' refers to assets, property, or valuable gifts given by the bride's family to the groom's family upon marriage. It is a cultural practice that has held monumental significance in the marriage praxis in India. Although its origins are rooted in historical and social contexts, dowry has taken on various forms across different cultures, regions and religions.

For generations, paying and accepting dowry at the time of marriage has been the social norm. The practice has, for centuries, strengthened the roots of patriarchy in our society. Initially, the dowry system was intended as a form of inheritance for women, providing them with financial security in their marital homes. However, over time the practice transformed into a transactional expectation, which allowed the groom's family to demand exorbitant amounts and made it obligatory for the bride's family to comply with said demands. This shift has contributed to numerous social issues including violence against women in their marital homes, dowry related deaths etc.

'Dowry death' is a term that refers to a grave consequence of dowry-related issues. It pertains to cases where a woman dies under suspicious or unnatural circumstances within a few years of marriage. The death occurs as an unfortunate consequence of harassment, and verbal and/or physical abuse by the husband or his family due to dissatisfaction regarding the amount of dowry paid by the bride's family.

The term 'Dowry Death' has been legislatively defined as

*the death of a woman caused by any burns or bodily injury that occurs under otherwise normal circumstances within seven years of her marriage and it is shown that soon before her death she was subjected to cruelty or harassment by her husband or any relative of her husband for, or in connection with, any demand for dowry, such death shall be called 'dowry death' <sup>1</sup>*

## **Death Research Paper:**

**Researching Death, Dying and Bereavement** Erica Borgstrom, Julie Ellis, Kate Woodthorpe, 2018-10-22 This book examines research on death dying and bereavement and how our approaches perceptions and expectations shapes what we can know about the end of life The contributions include personal and professional reflections and practical suggestions for conducting research in this field The volume stems from the resurgence of the international and interdisciplinary study of death in the last 20 years Within this empirical research is often viewed as sensitive but little has been written about the experience of conducting research in this area There has thus been little reflection on the opportunities and challenges faced in undertaking research as the field of death studies grows including the accommodation and recognition of cultural differences This volume seeks to in part address this gap The chapters in this book were originally published in the *Mortality* journal and the *Death Studies* journal
