Societies in Landscapes Nobukazu Nakagoshi, Jhonamie A. Mabuhay, 2014-05-09 This book focuses on three major means of achieving a low carbon society conservation of the ecosystem complex changes of arrangement of landscapes and creation of biodiversity There are specific countermeasures to be taken for carbon absorption in the three types of landscapes urban cultural and natural because their carbon balances differ Urban landscapes are promising sites because they have the potential for greening and the creation of biodiversity Cultural landscapes in the tropics had not been actively researched until recently but this book now presents a collection of several cases focused on those areas Natural landscapes had existed in abundance in developing countries later nature protection areas were designated to coexist with development Now however developmental pressure has penetrated into those nature protection areas and landscape ecological projects are urgently required to preserve them As a result of global warming abnormal weather phenomena including super typhoons have occurred frequently in recent years The major underlying cause is the higher concentration of greenhouse gases released by human activities As well major natural absorbers of CO₂ such as forests wetlands and coral reefs are shrinking and the human impact is causing the ecological balance to deteriorate Controlling CO₂ emissions and expanding the CO₂ absorbers are keys to reducing total CO₂ Low carbon societies can be established by maintaining the original CO₂ balance through integration of multiple tools with contributions from diverse fields such as physics and chemistry physiology and humanities and education On the basis of an international consensus the environment must be protected no matter what sacrifices are required As this book demonstrates achieving a low carbon society is a top priority and landscape conservation

is the first step in ecological research toward that goal Ecological Stability, 1976 The term stability in its ecological context has been applied to populations communities and most recently to ecosystems with such an array of meanings that it has almost become a pantheon This review of selected literature points out the problems inherent in relying on either static measures e.g. species diversity connectivity or energy balance as a measure of complexity to arbitrarily rank the relative stabilities of ecosystems or the dynamic approach of analyzing the mathematical stability of linear or nonlinear models The research direction emphasized is that of development of new measures of ecosystem complexity based on ecosystem level characteristics e.g. nutrient retention or ecosystem metabolism and relating these measures of complexity to an a priori defined ecosystem stability The Philosophy of Biology Kostas Kampourakis, 2013-06-18 This book brings together for the first time philosophers of biology to write about some of the most central concepts and issues in their field from the perspective of biology education The chapters of the book cover a variety of topics ranging from traditional ones such as biological explanation biology and religion or biology and ethics to contemporary ones such as genomics systems biology or evolutionary developmental biology Each of the 30 chapters covers the respective philosophical literature in detail and makes specific suggestions for biology education The aim of this book is to inform biology educators undergraduate and graduate students in biology and related fields students in teacher training programs and curriculum developers about the current state of discussion on the major topics in the philosophy of biology and its implications for teaching biology In addition the book can be valuable to philosophers of biology as an introductory text in undergraduate and graduate courses

A Green and Permanent Land Randal S. Beeman,James A. Pritchard,2001 Once patronized primarily by the counterculture and the health food establishment the organic food industry today is a multi billion dollar business driven by ever growing consumer demand for safe food and greater public awareness of ecological issues Assumed by many to be a recent phenomenon that industry owes much to agricultural innovations that go back to the Dust Bowl era This book explores the roots and branches of alternative agricultural ideas in twentieth century America showing how ecological thought has challenged and changed agricultural theory practice and policy from the 1930s to the present It introduces us to the people and institutions who forged alternatives to industrialized agriculture through a deep concern for the enduring fertility of the soil a passionate commitment to human health and a strong advocacy of economic justice for farmers Randal Beeman and James Pritchard show that agricultural issues were central to the rise of the environmental movement in the United States As family farms failed during the Depression a new kind of agriculture was championed based on the holistic approach taught by the emerging science of ecology Ecology influenced the permanent agriculture movement that advocated such radical concepts as long term land use planning comprehensive soil conservation and organic farming Then in the 1970s sustainable agriculture combined many of these ideas with new concerns about misguided technology and an over consumptive culture to preach a more sensible approach to farming In chronicling the overlooked history of alternative agriculture **A Green and Permanent Land** records the significant contributions of individuals like Rex Tugwell Hugh Bennett Louis Bromfield Edward Faulkner Russell and Kate Lord Scott and Helen Nearing Robert Rodale Wes Jackson and groups like Friends of the Land and the Practical Farmers of Iowa And by demonstrating how agriculture also remains central to the public interest especially in the face of climatic crises genetically altered crops and questionable uses of pesticides this book puts these issues in historical perspective and offers readers considerable food for thought *Ecological Diversity* E.
