

Triple Scale Hydrometer Guide

www.stillintheclear.com

The triple scale hydrometer is one of the most useful tools for the beginner to learn how to use. This hydrometer will give you a deeper understanding of the fermentation process. It can be used to help troubleshoot problems with a fermentation. It also allows you to calculate your ABV% and how much distillate your batch will produce.

This Hydrometer has 3 different scales on it, hence the name, but this guide will only focus on the Specific Gravity scale. This is the expanded portion in the graphic.

This type of hydrometer measures the amount of sugar in solution with your mash. It DOES NOT measure alcohol in the mash. This is useful because if we know how much sugar is in the mash for the yeast to consume then we can calculate the expected amount of alcohol the yeast can produce.

Specific Gravity(SG) is measured in units called gravity points. This is represented on the scale from 0.990 to 1.160. Gravity points can be used in many other ways during recipe planning and mashing, but this guide only considers SG during fermentation.

The mark on the scale labelled 1.000 represents no sugar in the mash and is our base measurement. On most Triple Scales each hash mark represents 2 gravity points.

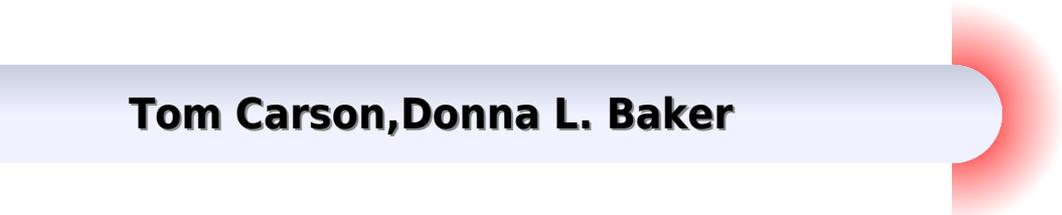

At the end of the mashing process and just before you pitch your yeast you should take your first SG reading. This is known as the Original Gravity or OG sometimes called Starting Gravity or Initial Gravity. With the OG you can calculate the ABV% of the mash if the ferment finishes out to 1.000

As the fermentation continues each SG reading will get smaller until the fermentation is complete and the SG reading will be 1.000 or lower. This can be useful because if we think the fermentation has stalled we just need to take specific gravity reading on a couple different days. If the readings remains the same then the fermentation has indeed stalled, but if the readings continue to fall then we know the fermentation is still working.

The last SG reading you take is known as the Final Gravity or FG. In most instances this will be a reading of 1.000 or lower. Now with the OG and the FG you can calculate the ABV% of your mash, the total amount of alcohol in the mash, and an estimated yield after distillation. You can use the formulas found on the Useful Formulas Worksheet.
