

## 9.1 Energy and Life

### Learning Objectives

- LO1** Describe the role of ATP in cellular metabolism.
- LO2** Explain how organisms get the energy they need to grow and live.

### Explorative Objectives

**Explorative Objective 1** Explain how ATP energy is the cellular work coin. It powers metabolism by doing work.

- 1.** Addressed: **Metabolism** is ATP is fundamental to metabolism because all metabolic reactions require energy.
  - a.** Use of ATP is essential to almost all cellular processes, from signal transduction to growth.
  - b.** Cells use energy to maintain a potential across a membrane (e.g., sodium-potassium pump).
  - c.** Cells use energy to help ATP hydrolysis to drive many other cellular processes.
- 2.** Energy production: ATP is used to drive many cellular processes, from signal transduction to growth, and to drive other cells.
- 3.** Cells cannot take in a net amount of ATP via transporters. Cells synthesize ATP from ADP either inside or using energy from other sources.

**Explorative Objective 2** How do organisms get the energy they need to live? Cells store energy in molecules like glucose and use it to make ATP.

- 1.** Metabolism: get energy, converting energy from organisms.
- 2.** Metabolism: get energy for growth and other cellular processes.
- 3.** Metabolism: the process that uses light energy to produce carbohydrates.

### Chemical Energy and ATP

The questions 1–4, which you will be asked to answer, are the central questions of this chapter.

- 1. \_\_\_\_\_ is the ability to do work.
- 2. The most common compound with free energy is \_\_\_\_\_ (ATP).
- 3. \_\_\_\_\_ is an E. coli that experiments that is used to study ATP metabolism.
- 4. The \_\_\_\_\_ of ATP and the rate of its hydrolysis are used to measure energy.
- 5. ATP is used to drive many cellular processes, from signal transduction to growth.

## **Cellular Energy Workbook:**

**Cellular Energy Metabolism and its Regulation** Bozzano G Luisa, 2012-12-02 Cellular Energy Metabolism and Its Regulation examines the metabolic and molecular aspects of living organisms Beginning with a discussion of evolutionary design and its close analogy with human design it emphasizes the notion that evolution is a process of functional design and that the characteristics of an organism whether morphological or molecular were selected because of functional advantage to the organism s ancestors Thus the study of an enzyme a reaction or a sequence can be biologically relevant only if its position in the hierarchy of function is kept in mind This book deals with some aspects of metabolism from that point of view The key concepts discussed include the conservation of solvent capacity and energy functional stoichiometric coupling and metabolic prices adenylate control and the adenylate energy charge aspects of enzyme behavior that appear to be related to metabolic control interactions between metabolic sequences and the adenylate energy charge in intact cells This book was designed for graduate students in biochemistry physiology microbiology and related fields However it may also be useful to senior undergraduate students and more advanced workers who have a direct or peripheral interest in energy metabolism It assumes a general familiarity with the material covered in a standard biochemistry textbook as well as some knowledge of such related areas as genetics
