

NOTE: Viewed from back of connector.

Completed ignition switch and dash mounting bracket assembly.

INSTALLATION

NOTE: Some ignition switches may be packaged with a copper lamp holder bracket. This bracket is not used in this application.

1. Install the back-up nut C onto the switch. The depth that this nut is threaded onto switch will determine how deep the switch will mount into the bracket. It may be necessary to do some fine tuning to get the depth adjusted just right.
2. Insert the switch and back-up nut assembly into the hole in the factory mounting bracket as shown below left. If you do not have your original bracket, they are available thru most reproduction truck parts suppliers.
3. Screw threaded collar A onto the switch until it fits snug against the bracket, but do not tighten it yet.
4. Insert your existing lock cylinder into the new switch, then rotate the assembly positioning it so that the offlock position is straight up and down.
5. Screw threaded collar A down very lightly so that the switch will no longer rotate or move in the bracket.
6. Attach bracket and ignition switch assembly back into the dashboard so that the lock cylinder appears in the key opening in the face of the dash.
7. Plug in connector D from the dash wiring harness (bag G) onto the switch.

NOTE: New lock cylinders with the correct style GM keys for your new 510579 ignition switch are available from AAW. Please order part number 500674 separately.
