

# ENDOCRINE SYSTEM

The **endocrine system** is a complex network of glands and organs. The glands and organs create hormones and release them directly into the blood so they can travel to tissues and organs all over the body.

The hormones are able to control and coordinate our body's metabolism, energy level, reproduction, growth and development, and response to injury, stress, and mood.

While many parts of the body make hormones, the major glands that make up the **endocrine system** are the: hypothalamus, pituitary, thyroid, parathyroids, adrenals, pineal body, the ovaries, and the testes.
