the First International Conference on Data Engineering and Communication Technology ICDECT held during March 10 11 2016 at Lavasa Pune Maharashtra India The book discusses recent research technologies and applications in the field of Computer Science Electrical and Electronics Engineering The aim of the Proceedings is to provide cutting edge developments taking place in the field data engineering and communication technologies which will assist the researchers and practitioners from both academia as well as industry to advance their field of study *Proceedings of International Conference on Data Science and Applications* Mukesh Saraswat, Chandreyee Chowdhury, Chintan Kumar Mandal, Amir H. Gandomi, 2023-02-16 This book gathers outstanding papers presented at the International Conference on Data Science and Applications ICDSA 2022 organized by Soft Computing Research Society SCRS and Jadavpur University Kolkata India from 26 to 27 March 2022 It covers theoretical and empirical developments in various areas of big data analytics big data technologies decision tree learning wireless communication wireless sensor networking bioinformatics and systems artificial neural networks deep learning genetic algorithms data mining fuzzy logic optimization algorithms image processing computational intelligence in civil engineering and creative computing Nuts & Volts, 2003-02 **Nuts & Volts Magazine**, 2003 *Applied Science & Technology Index*, 2000 *Water Level Controller* Harpreet Kaur Channi, Harpreet Kaur Mridul Nayyar, 2019-09-22 In most houses water is first stored in an underground tank UGT and from there it is pumped up to the overhead tank OHT located on the roof People generally switch on the pump when their taps go dry and switch off the pump when the overhead tank starts overflowing This results in the unnecessary wastage and sometimes non availability of water in the case of emergency The simple circuit presented here makes this system automatic i e it switches on the pump when the water level in the overhead tank goes low and switches it off as soon as the water level reaches a pre determined level It also prevents dry run of the pump in case the level in the underground tank goes below the suction level In the figure the common probes connecting the underground tank and the overhead tank to 9V supply are marked C The other probe in underground tank which is slightly above the dry run level is marked S The low level and high level probes in the overhead tank are marked L and H respectively When there is enough water in the underground tank probes C and S are connected through water As a result transistor T1 gets forward biased and starts conducting This in turn switches transistor T2 on Initially when the overhead tank is empty transistors T3 and T5 are in cut off state and hence pnp transistors T4 and T6 get forward biased via resistors R5 and R6 respectively As all series connected transistors T2 T4 and T6 are forward biased they conduct to energise relay RL1 which is also connected in series with transistors T2 T4 and T6 Thus the supply to the pump motor gets completed via the lower set of relay contacts assuming that switch S2 is on and the pump starts filling the overhead tank Once the relay has energised transistor T6 is bypassed via the upper set of contacts of the relay As soon as the water level touches probe L in the overhead tank transistor T5 gets forward biased and starts conducting This in turn reverse biases transistor T6 which then cuts off But since transistor T6 is bypassed through the relay contacts the pump continues to

run The level of water continues to rise Construction of Automatic Water Level Controller C. B. Ghadge,P. M [Gd] Thigle,1993 Automatic Liquid Level Detection and Refill in a Container Using Ultrasonic Module Narayana Mayya,2016

Abstract The need to conserve water has increased with adverse weather conditions due to global warming The proposed embedded system model provides an economical method in preventing unmonitored water loss from storage facilities The model consists of an ultrasonic level controller that is interfaced with a microcontroller Using sonar the delay between the transmitted and received signals is used for finding the liquid level When the level of a liquid falls below a certain point the pump automatically starts and continues pumping until the required liquid level is reached The pump operates using the signals received from a microcontroller and uses a relay mechanism A step down transformer a bridge rectifier a capacitive filter and a voltage regulator convert the AC to DC voltage level of 5v to operate both the microcontroller and Liquid Crystal Display LCD Results show the level measurement is unaffected by the physical properties of a liquid **Design of Microcontroller Based Embedded Water Level Sensor** Manash Chanda,2012-01 A torrential flood can sink and wash away homes as well as damage various other properties such as electrical goods vehicles and the like This is a loss for residents The worst effect of floods is on one s health Floods often result in a loss of life especially in low lying areas and along river banks Floods damage public property such as roads buildings and telephone and electrical infrastructures The situation becomes worse near a dam or the barrage where the river water is stored for the multipurpose use During the monsoon time the water level of the dam increases and when it overflows the dam it causes flood thus destroys many lives and also properties Although there is a provision for the alert but the alert is made by observing the water level at the dam manually and then sending the alarm to the people Under this circumstance if we make some autonomous system which will measure the water level and also transmit the data to specific location we can save a lot of lives as well as properties So the aim of my project is PIC 16F877A based embedded water level sensor for an automatic flood alarming system **Analysis of a Water Level Control** Bhupendra Girdharlal Shah,1969 This thesis presents the analysis of a controller for a liquid level control system The controller was built using an analog computer providing the ability to easily construct up to three modes of control The controllers analyzed were 1 Proportional 2 Proportional plus reset and 3 Proportional plus reset plus preact The system was tuned experimentally to provide satisfactory operation and root loci were also plotted to show the system stability for the three modes Abstract leaf ii **Stability of Automatic Water Level Control and Self-excited Oscillation in Open Canals** I.
