

Bentley® AutoPIPE™ V8i:

The Most Productive Tool for Pipe Stress Analysis

Bentley AutoPIPE V8i is the most productive design and analysis program for calculating piping code stresses, loads, and deflections under static and dynamic load conditions, even to the highest nuclear standards. Costly plant shutdowns caused by pipe moving as they heat up can be avoided with 3D "hot" stress simulation. This functionality can also be used to avoid piping failures during extreme loading conditions like earthquakes. AutoPIPE also includes special features for advanced buried pipeline analysis, wave loading, fluid transients, FRP/GFR or plastic pipe, as well as time-saving integrations with STAAD.Pro and all major plant design systems.

Design, Object-Based Graphical User Interface

The powerful 3D graphical user interface found in Bentley AutoPIPE V8i enables users to easily create and modify the pipe stress model. Users can simply point and click on the graphical model to create, modify, or delete pipe elements, loads, or components, then view responses. The model display is continuously updated for instant visual feedback. Using AutoPIPE V8i graphical editor options, users can select, delete or modify components, supports, pipe properties, temperature, pressure, or other parameters across an entire length of pipe with one command. Graphical selection of supports is also used to set loads and/or pipe operations. When run checks, warn or make changes to the input data quickly using interactive grid spreadsheets like Excel. AutoPIPE V8i features up to 30 units or sets steps to control modeling, perform "what-if" analysis, or to avoid quality through design warnings.

Advanced Analysis Features for Varied Piping Environments

AutoPIPE V8i provides unique capabilities for process, power, oil storage, nuclear, underground, offshore floating, production storage, and offshore FPSO-platforms and offshore platform access with 2D environmental modeling. Advanced AutoPIPE V8i capabilities include nonlinear friction analysis, full or semi floating, buried pipeline analysis, jacketed piping, dynamic loadings, earthquakes, flowline reinforced pipes, FRP/GFR, and GFR plastic piping analysis. It also includes thermal distribution or loading, thermal expansion, pipe structure interaction, fluid treatment with closure loss and relief valve action, advanced load sequencing, nonlinear support gaps and friction and jacketed piping, load stress calculation for WPC, 100, 300C, 200, 100, 5000, 1000, 600, 500 is available using AutoPIPE Results.

Graphical Review of Analysis Results

Once a system is analyzed, users can click on the graphical model and instantly view stresses, deflections, loads, displacements. Color-coded results and grouping windows enable users to quickly identify and investigate critical areas without having to review a substantial amount of data in table form. Up to 1,000,000 combinations can be viewed with the powerful on-screen table grid, which provides immediate filtering, sorting, and printing of maximum result values.

Bentley AutoPIPE includes graph simulation to avoid costly operation failures.

Interface with AutoPIPE Vessel, STAAD.Pro, Plant Design CAD Systems, and ProjectWise

The only solution on the market today for a truly integrated design between piping and structural analysis. AutoPIPE V8i can automatically transfer pipe support loads as well as support complete structures to and from STAAD.Pro V8i, saving months of design time coordinating with structural engineers. Design Engineers AutoPIPE services transfer piping model loads to vessels to AutoPIPE through the best vessel design option: 3D plant design CAD models from AutoPIPE V8i, Plantwise V8i, OpenPlant 3D, AutoPIPE V8i, SmartPlant, CADWATERS, Substation, Invenio, Plant 3D, CAESAR, and AutoPIPE V8i. AutoPIPE V8i to pipe models of steel truss and stress analysis for steel truss.

AutoPIPE V8i provides users with full mechanical interoperability with CAESAR 2, and its modeling and time cost reduced by Bentley Navigator or MicroStation. Integrates any CAD model to support early engineering decision making, perform 3D hot stress simulation, and reduce design iterations. AutoPIPE also generates fully dimensional stress simulation with results data and warnings highlighting the pipe stress engineer's changes. In addition, AutoPIPE V8i is integrated with ProjectWise for global collaboration of engineering and CAD data flow on major projects.

Quality Assurance

AutoPIPE V8i rigorous quality assurance program has passed numerous nuclear and nuclear powerplant houses Committee on API standards for 100% of April 10 2008/01, CSA N289, 1-88 ASME NQA-1, and ASME NAL-2 standards, meeting Bentley AutoPIPE V8i one of the few pipe stress programs with a high level of quality. AutoPIPE Nuclear V8i provides design of critical safety systems for ASME Class 1, 2, or 3.
