Removal of the tongue is necessary to view the gasticostyle tubes, which are just above the opening of the jaw. These pair of coverings lead to the lungs; membranes and help to regulate pressure when the frog breathes.

At the back of the mouth is the large opening of the gasticostyle. This tube leads to the stomach.

Just in front of the esophagus (toward the tongue) is a smaller opening called the **glottis**. This opening leads to the lungs. This is how frogs take in air.

B. Label each of the underlined structures.

The Animal Experimentation Debate David E. Newton,2013-05-09 Reviewing the topic from antiquity to the present day this book examines the debate over the use of animals in research in a fair and balanced way The debate over the use of nonhuman animals in experimental research has gone on for centuries and it continues as vigorously today as it ever has In fact in the last decade the controversy has intensified making animal testing a topic at the highest level of debate of any socioscientific issue in the United States This book presents all sides of the issue so that readers can come to their own conclusions as to the morality and validity of animal experimentation and provides biographies of individuals and descriptions of organizations that have been involved in the debate over the centuries Additionally it documents the historical shift in thinking that made animal experimentation commonplace between the time of the ancient Greeks and the 19th century to the mindset of some who argue for an end to the practice and alternative ways of conducting medical experimentation to benefit human health
