

Digestion System Study Guide

Be able to describe the 6 different digestive processes and know the two main groups of digestive organs.

Consists of two types of organs:

- 1) **Gastrointestinal Tract**-a series of hollow organs through which food passes as it is ingested, digested and absorbed, also called the digestive tract or alimentary canal
- 2) **Accessory Organs**-assist in digestion, not part of the digestive tract, includes: teeth, tongue, salivary glands, liver, gallbladder, and pancreas

BASIC DIGESTIVE FUNCTIONS

1. **Ingestion**-delivery of food into digestive system via the mouth (normally)
2. **Secretion**-endocrine and exocrine glands secrete substances to aid in digestive process (includes, mucus, enzymes, acids and hormones)
3. **Propulsion**-the movement of a substance through a hollow organ via peristaltic contractions of smooth muscle layers and aided by secreted mucus.
4. **Digestion**-the process of breaking down a substance into smaller subunits,

Two Kinds: **Mechanical**-physically break food down into smaller pieces by chewing and movement

Chemical-enzyme catalyzes reactions that break chemical bonds within particles

5. **Absorption**-the transportation of a substance across an epithelial lining into the bloodstream or lymph
6. **Defecation**-elimination of undigestible materials and a way for the body to eliminate metabolic waste (specialized form of propulsion)
