Alpine Physics: Science In The Mountain Environment Valerio Faraoni, 2019-05-23 This unique volume applies physics and basic science to the mountain environment and is written in a non technical language for curious laypeople who wonder why or how natural phenomena happen and what their scientific explanation may be The book discusses physics in a non specialized way Alpine Physics is mostly organized in categories relevant for non scientists with an interest in alpine environments Intuitive decision making is often just grounded in plain common sense to which mountain and nature lovers relate easily especially when involving high stakes decisions based on the estimation of such a treacherous environment The book highlights how this intuitive decision making can be complemented and augmented by basic scientific knowledge and with better understanding it leads one to become a rational decision maker The book stimulates its readers to reason and discover why things are the way they are at high altitudes where many risk factors are aggravated often dramatically by steep gradients The writing style marries that of the conventional science textbook and that of the informal North American climbing guidebooks

Melt Water Retention Processes in Snow and Firn on Ice Sheets and Glaciers: Observations and Modeling W. Tad Pfeffer, Jason E. Box, Robert S. Fausto, Horst Machguth, 2018-11-08 Melt takes place where the surface of glaciers or ice sheets interacts with the atmosphere While the processes governing surface melt are fairly well understood the pathways of the meltwater from its origin to the moment it leaves a glacier system remain enigmatic It is not even guaranteed that meltwater leaves a glacier or ice sheet On Greenland for example only slightly more than 50% of the meltwater runs off The remainder mostly refreezes within the so called firn cover of the ice sheet This eBook contains 11 studies which tackle the challenge of understanding meltwater retention in snow and firn from various angles The studies focus both on mountain glaciers and on the Greenland ice sheet and address challenges such as measuring firn properties quantifying their influence on meltwater retention modelling firn processes and meltwater refreezing as well as unravelling the mechanisms within the recently discovered Greenland firn aquifers
