Decimal Numbers

The numbers after the decimal point represent fractions with denominators that are powers of 10. The decimal point separates the whole number part from the fractional part.

For example, 0.9 represents $\frac{9}{10}$.

Place Value Chart

ADDING AND SUBTRACTING DECIMAL NUMBERS

To add or subtract decimal numbers, line up the numbers so that the decimal points are aligned. Then add or subtract as usual, keeping the decimal point in the same place.

For example, $23 - 0.37 =$

$$\begin{array}{r} 23.00 \\ - 0.37 \\ \hline 22.63 \end{array}$$

MULTIPLYING AND DIVIDING DECIMAL NUMBERS

To multiply decimal numbers, multiply them as though they were whole numbers. The number of decimal places in the product is the sum of the number of decimal places in the factors. For example, 3.72×4.5 is

$$\begin{array}{r} 3.72 \\ \times 4.5 \\ \hline 16.740 \end{array}$$

2 decimal places
1 decimal place
3 decimal places

To divide decimal numbers, first make sure the divisor is a whole number. If it is not, move the decimal place to the right (multiply by 10, 100, and so on) to make it a whole number. Then move the decimal point the same number of places in the dividend.

For example,

$$\begin{array}{r} 0.42 \div 1.2 = 4.2 \div 12 \\ \underline{0.35} \\ 0.070 \\ \underline{0.60} \\ 0.100 \\ \underline{0.96} \\ 0.040 \\ \underline{0.36} \\ 0.040 \\ \underline{0.36} \\ 0.000 \end{array}$$

The decimal point in the answer is placed directly above the new decimal point in the dividend.

Percents to Decimals and Decimals to Percents

To change a number from a percent to a decimal, divide by 100 and drop the percent sign:

$$58\% = 58/100 = 0.58.$$

To change a number from a decimal to a percent, multiply by 100 and add the percent sign:

$$0.73 = .73 \times 100 = 73\%.$$

Simple Interest

Given the principal (amount of money to be borrowed or invested), interest rate, and length of time, the amount of interest can be found using the formula

$$I = p \cdot r \cdot t$$

where

I = interest (dollar amount)

p = principal

r = percentage rate of interest

t = time period.

For example, find the amount of simple interest on a \$3800 loan at an annual rate of 5.5% for 5 years:

$$p = \$3800$$

$$r = 5.5\% = 0.055$$

$$t = 5 \text{ years}$$

$$I = (3800)(0.055)(5) = 1045.$$

The amount of interest is \$1045.

Scientific Notation

Scientific notation is a convenient way to express very large or very small numbers. A number in this form is written as $a \times 10^n$, where $1 \leq |a| < 10$ and n is an integer. For example, 3.62×10^5 and -1.2×10^{-4} are expressed in scientific notation.

To change a number from scientific notation to a number without exponents, look at the power of tens. If that number is positive, move the decimal point to the right. If it is negative, move the decimal point to the left. The number tells you how many places to move the decimal point.

For example,

$$3.97 \times 10^3 = 3970.$$

To change a number to scientific notation, move the decimal point so it is to the right of the first nonzero digit. If the decimal point is moved n places to the left and this makes the number smaller, n is positive; otherwise, n is negative. If the decimal point is not moved, n is 0.

For example, $0.0000216 = 2.16 \times 10^{-5}$.
