The Digital Transformation of Labor Anthony Larsson, Robin Teigland, 2019-11-11 Through a series of studies the overarching aim of this book is to investigate if and how the digitalization digital transformation process causes or may cause the autonomy of various labor functions and its impact in creating or stymieing various job opportunities on the labor market This book also seeks to illuminate what actors groups are mostly benefited by the digitalization digital transformation and which actors groups that are put at risk by it This book takes its point of departure from a 2016 OECD report that contends that the impact digitalization has on the future of labor is ambiguous as on the one hand it is suggested that technological change is labor saving but on the other hand it is suggested that digital technologies have not created new jobs on a scale that it replaces old jobs Another 2018 OECD report indicated that digitalization and automation as such does not pose a real risk of destroying any significant number of jobs for the foreseeable future although tasks would by and large change significantly This would affects welfare as most of its revenue stems from taxation and particularly so from the taxation on labor directly or indirectly For this reason this book will set out to explore how the future technological and societal advancements impact labor conditions The book seeks to provide an innovative enriching and controversial take on how various aspects of the labor market can be and are affected the ongoing digitalization trend in a way that is not covered by extant literature As such this book intends to cater to a wider readership from a general audience and students to specialized professionals and academics wanting to gain a deeper understanding of the possible future developments of the labor market in light of an accelerating digitalization digital transformation of society at large
