6. Double-DES, using 112-bit keys, is obsolete after an attack reduced its security to match DES

5 Modes of DES

Mode 1: Electronic Code Book (ECB)

- 64-bit blocks of data are processed by the algorithm using the key
- The ciphertext produced can be padded to ensure the result is a 64-bit block
- Encryption errors only affect individual blocks
- ECB is run in parallel so it is fast
- Not good for large messages since the same key is reused a pattern may emerge
- Smaller messages lengths like databases can use this method

Mode 2: Cipher Block Chaining (CBC)

- Works with 8-bit (or smaller) blocks and uses a combination of stream ciphering and block ciphering
- Ciphertext block must be the same size as the plaintext block
- Encryption errors will affect any future block encryption
- Should not be used to encrypt video or voice signals
- This problem led to the need for DES OFB mode
