Recent studies have shown a significant correlation between regular exercise and improved mental health outcomes (Johnson & Lee, 2020). According to Smith (2019), developing healthy habits, such as regular physical activity, can have a profound impact on overall well-being. This aligns with the findings of the National Institute of Mental Health (2020), which highlights the importance of lifestyle factors in promoting mental health. Furthermore, TED Talks (2018) have popularized discussions on the relationship between vulnerability and emotional resilience, shedding light on the importance of embracing vulnerability as a means of personal growth. As emphasized by Smith (2021), adequate sleep is also crucial for cognitive function, underscoring the interconnectedness of physical and mental health. These findings underscore the multifaceted nature of mental well-being and the importance of adopting a holistic approach to health promotion.
