In exploring the influence of early childhood education on cognitive development, it's essential to understand the role of play in learning. Research has shown that interactive play enhances problem-solving abilities in young children (Moore 37). For example, one study by Moore and Patel found that children who engaged in educational play activities were better equipped to handle complex tasks later in life, indicating that early exposure to creative play fosters cognitive skills (Moore and Patel 48-50). Moreover, the importance of teacher involvement during play is not to be overlooked, as it can direct the child's attention to more complex cognitive tasks (Moore et al. 59, 34).
