- Scientific Methods
  - Fact- generally a close agreement by competent observers who make a series of observations about the same phenomenon
  - Hypothesis- an educated guess that is only presumed to be factual until supported by experiment
    - To distinguish whether a hypothesis is scientific or not, check to see if there is a test for proving it wrong; if there is no test, then it is not scientific

    - Violent motion
      - Results from pushing or pulling forces; imposed motion
  - Taught that all motions are due to the nature of the moving object or due to a sustained push or pull

  - Leaning Tower
    - Galileo easily demolished Aristotle's falling body hypothesis
    - Dropped objects of various weights from the top of the Leaning Tower of Pisa to compare their falls
    - Found that a stone twice as heavy as another did not fall twice as fast
    - Except for the small effect of air resistance, objects of various weights,
