

A concrete pump truck with a long green boom is positioned at a construction site. The truck is white with a yellow stripe on the side. The boom is extended upwards and then horizontally to the right. Several workers in blue and grey clothing are standing near the truck. The background shows a line of trees and a clear sky. The entire image is framed by a thin yellow border.

*Guide for Aquaculture Seawater Systems* John E. Huguenin,John Colt,1989 The primary objective of this book is to provide  
basic information and considerations needed for the design construction and operation of seawater systems for culturing  
purposes The seawater flow rate range of 10 1000 gallons approximately 40 4000 liters per minute has been chosen because  
it includes the vast majority of such systems currently in use While the objectives of these systems vary widely they all  
depend on a common technological and biological data base Since the seawater system is usually only a means to an end  
most potential users have little prior practical experience or technical knowledge in this area Practical information on  
seawater systems for culturing purposes tends to be fragmented and not readily available in usable form Most conventional  
engineering experience is with marine systems which are orders of magnitude larger This technology is often not readily  
scaled down or directly useable and more than likely prohibitively expensive The subject of this book crosses many different  
disciplines interests and backgrounds This can cause considerable confusion with definitions and units of measure
