

Alternative Computing Architectures As a Solution to the Application of Moore's Law Energy Consumption

Energy consumption is a major concern for data centers and cloud providers. As the number of servers and the amount of data processed increase, the energy consumption of data centers is growing rapidly.

Moore's Law states that the number of transistors on a microchip doubles approximately every two years, which has led to a steady increase in the performance of microprocessors. However, this increase in performance has also led to a corresponding increase in energy consumption.
