

GCSE Required Practical – Physics 1 – Investigating Resistance

Resistance: how difficult it is for current to flow through part of the circuit.

What's the point of the practical?

To find out resistance of a wire.

(You could look at different lengths of wire, different thicknesses, or even different temperatures)

Results:

$$\text{resistance (}\Omega\text{)} = \frac{\text{potential difference (V)}}{\text{current (A)}}$$

The longer the wire, the more resistance

The thicker the wire, the less resistance

The higher the temperature the more resistance

Example Apparatus

Voltmeter: measures the potential Difference

Ammeter: measures the current

Metre stick:

Measures the length of wire that the current is going through

What may they ask us about?

- Why must the power pack be kept on a low potential difference / What are the hazards *(The wire will get very hot, could burn you)*
- Explain how the temperature affects the resistance *(as the wire gets hot, the ions inside the wire vibrate faster so there are more collisions with the electrons cannot flow as easily)*
- Why is it important to switch the electricity off in between each reading *(to let the wire cool down, as temperature affects resistance)*
- What sort of error could cause all the ammeter/voltmeter readings to be too high *(a zero error – the meters need to be set at zero to start with)*
- Resolution of measurements, repeatability, reproducibility, control variables etc etc
