The Future of the Curriculum Yana Manyukhina, 2026-05-04 This book presents a compelling vision for curriculum futures that prioritises democratic participation and authentic learning over narrow accountability measures As educational systems worldwide grapple with post pandemic challenges climate concerns and artificial intelligence traditional approaches seem ill equipped to address these unprecedented challenges Drawing on research from diverse global contexts from Scotland s governance reforms to AI enhanced curricula in the MENA region from self directed learning environments in England to cross curricular frameworks in Indian schools these contributions converge on three consistent themes the centrality of student agency in learning the importance of holistic development that integrates academic achievement with well being and the need for democratic and participatory approaches to education The collection documents the harmful effects of neo liberal approaches that reduce curriculum to measurable outcomes in literacy and numeracy whilst demonstrating the transformative potential of children s agency and community grounded learning Contributors provide compelling evidence that children as young as nine are capable of directing their own learning when provided with appropriate structures and support This volume will be essential reading for curriculum specialists primary education researchers teacher educators and policymakers seeking to develop

more democratic and inclusive approaches to curriculum design in contemporary educational contexts This book was originally published as a special issue of Education 3 13 International Journal of Primary Elementary and Early Years Education

The Social Ecology of Resilience Michael Ungar,2011-10-08 More than two decades after Michael Rutter 1987 published his summary of protective processes associated with resilience researchers continue to report definitional ambiguity in how to define and operationalize positive development under adversity The problem has been partially the result of a dominant view of resilience as something individuals have rather than as a process that families schools communities and governments facilitate Because resilience is related to the presence of social risk factors there is a need for an ecological interpretation of the construct that acknowledges the importance of people s interactions with their environments The Social Ecology of Resilience provides evidence for this ecological understanding of resilience in ways that help to resolve both definition and measurement problems
