Financial Statement Analysis: Accounting in the Real World: E*Trade

The Internet revolutionized how individual investors buy and sell stock. Before the Internet, an investor could only trade stock using a stock broker. Through their investment firms, stock brokers had access to financial information not available elsewhere. As a result, most investors relied on their stock brokers for investment advice. When an investor made a decision on an investment, the stock broker would make the purchase on the stock exchange.

Today's investors can manage their own investments using an online investing site. For over 20 years, E*TRADE has been a leader in online investing. E*TRADE customers have 24/7 access to financial information and the tools to place stock trades. An E*TRADE customer can enter the stock symbol of a corporation and gain instant access to a wealth of information, including:

- recent news articles about the corporation,
- projected earnings,
- research reports, and
- charts of the stock prices for one day to over 30 years.

A link on E*TRADE's website opens to a wide range of financial ratios for the selected company. A section for AT&T Inc. (stock symbol, T) is shown.

The financial community has assigned names to the most commonly used vertical analysis ratios. For example, profit margin is the name given to the vertical analysis ratio for net income after federal income taxes. E*TRADE uses two methods to help investors compare AT&T's profit margin to other companies in the same industry. The illustration at the top of the next column indicates, from low to high, how the company's ratios compare to those of other companies. AT&T's profit margin, 17.28%, is in the upper range of other communications services companies.
