

Chapter 12 – Investments

Introduction

Companies raise funds to finance their operations by selling **equity securities** (common and preferred stock) and **debt securities** (bonds and notes). In this chapter, we will be looking at these securities from the perspective of the **investing** (purchasing) company.

Why might a company want to invest in another company?

Diversity in investment _____ leads to diversity in **accounting** for investments.

General principles

From the investing company's perspective, an investment in a financial instrument is an _____.

In its simplest form, when an investment is made, the company is using an asset (cash) to acquire an asset (the investment).

Dr. Investment	\$\$\$	
Cc. Cash		\$\$\$

The **accounting** for investments is driven by:

1. Whether the investment is a debt or equity security
2. The investor's purpose for holding the investment
3. The nature of the investment relationship

Debt investments

In a debt security, the investing company is **effectively** loaning money to the issuing (selling) company. We will use a bond for our discussion.

The price of a bond investment is determined by two cash flows:

1. A bond has a specified date when it matures. On that maturity date, the principal (also called the **face amount** or **maturity value**) is paid to investors.
2. During the holding period, investors receive interest payments (usually semi-annually) equal to some stated interest rate.

The **price** (or cost) of an investment in a bond is the _____ of these cash flows.

These cash flows are **discounted** using the _____ interest rate, which is the interest rate demanded by the market for investments with similar risk.

Bond price = (face amount x PV factor) + (interest payments x PV factor)

The PV factors come from present values tables in the textbook.
