Human Characteristics Preben Bertelsen, Henrik Høgh-Olesen, Jan Tønnesvang,2009-01-23 Every once in a while we have to reconsider the perennial questions concerning human nature What are the special human behaviours social practices and psychological structures that make us particularly human The field of evolution psychology and cognitive science is the most expanding inter disciplinary area of this field for the time being uniting different sciences under the same evolutionary paradigm and keeping them occupied by the same eternal questions stated above Relevant data and theoretical considerations are piling up but an overview is needed To facilitate this a large inter disciplinary conference entitled Human Mind Human Kind was held at Aarhus University Denmark The studies fall into three well defined sections 1 Evolution and Cognition Comparative and Developmental Perspectives 2 Human Sociality Morality and Religiosity 3 Human Sexuality and Mating Strategies Specifying the differences between our own species and the rest of the animal world always provokes debate But these demarcations simply have to be drawn once and again They focus attention and stimulate research exactly because they provoke and challenge other researchers to take up the glove and prove us wrong

**Microphysics of Clouds and Precipitation** H.R. Pruppacher,J.D. Klett,2010-06-25 Cloud physics has achieved such a voluminous literature over the past few decades that a significant quantitative study of the entire field would prove unwieldy This book concentrates on one major aspect cloud microphysics which involves the processes that lead to the formation of individual cloud and precipitation particles Common practice has shown that one may distinguish among the following addi tional major aspects cloud dynamics which is concerned with the physics respon sible for the macroscopic features of clouds cloud electricity which deals with the electrical structure of clouds and the electrification processes of cloud and precipi tation particles and cloud optics and radar meteorology which describe the effects of electromagnetic waves interacting with clouds and precipitation Another field intimately related to cloud physics is atmospheric chemistry which involves the chemical composition ofthe atmosphere and the life cycle and characteristics of its gaseous and particulate constituents In view of the natural interdependence of the various aspects of cloud physics the subject of microphysics cannot be discussed very meaningfully out of context Therefore we have found it necessary to touch briefly upon a few simple and basic concepts of cloud dynamics and thermodynamics and to provide an account of the major characteristics of atmospheric aerosol particles We have also included a separate chapter on some of the effects of electric fields and charges on the precipitation forming processes
