Radiothermography of Atmospheric Processes Dmitry M. Ermakov, 2020-09-29 This book summarizes the author's research resulted in developing the satellite radiothermography approach which allows retrieving dynamical and energy characteristics of atmospheric mesoscale and synoptic scale processes based on a close scheme of satellite passive radiometry data processing The book introduces new applications of the satellite passive microwave observations to detailed systematic study of tropical cyclones evolution climatology and characteristics of atmospheric river parameters of global atmospheric circulation and their variations on climatically significant scales The results presented in the book demonstrate a clear relation between the convergence divergence of latent heat from the lower atmosphere to the center of tropical cyclone with variations of its intensity and provide a better insight into the tropical cyclone dynamical energy balance based on remote data Atmosphere, Ocean and Climate Dynamics John Marshall, R. Alan Plumb, 1978-11-16 For advanced undergraduate and beginning graduate students in atmospheric oceanic and climate science Atmosphere Ocean and Climate Dynamics is an introductory textbook on the circulations of the atmosphere and ocean and their interaction with an emphasis on global scales It will give students a good grasp of what the atmosphere and oceans look like on the large scale and why they look that way The role of the oceans in climate and paleoclimate is also discussed The combination of observations theory and accompanying illustrative laboratory experiments sets this text apart by making it accessible to students with no prior training in meteorology or oceanography Written at a mathematical level that is appealing for undergraduates and beginning graduate students Provides a useful educational tool through a combination of observations and laboratory demonstrations which can be viewed over the web Contains instructions on how to reproduce the simple but informative laboratory experiments Includes copious problems with sample answers to help students learn the material Frontiers of Fluid Mechanics Shen Yuan, 2013-10-22 Frontiers of Fluid Mechanics documents the proceedings of the Beijing International Conference on Fluid Mechanics held in Beijing People's Republic of China 14 July 1987 The aims of the conference were to provide a forum for a cross sectional review of the state of the art and new advances in various branches of fluid mechanics and to promote the exchange of ideas by experts from different parts of the world The contributions made by researchers at the conference are organized into 18 parts Part 1 presents invited lectures covering topics such as separated flow porous flow and turbulence modeling Part 2 contains papers dealing with turbulence Parts 3 4 and 5 include studies on flow stability and transition transonic flow and boundary layer flows and shock waves respectively Part 6 is devoted to aerodynamics and gas dynamics Part 7 examines water waves while Part 8 is devoted to hydrodynamics and hydraulics The papers in Part 9 examine bubbles and drops Part 10 deals with experiments involving vortices jets wakes and cavities Part 11 contains studies on geophysical and astrophysical fluid mechanics Parts 12 and 13 investigate two phase flow and flow through porous media

and non Newtonian flow respectively Part 14 takes up magneto hydrodynamics and physic chemical flow Part 15 covers biofluid mechanics Part 16 contains papers on industrial and environmental fluid mechanics while Part 17 deals with heat transfer Part 18 contains papers that were received after the conference
