Biochemical Evidence For Evolution 26:

Molecular Markers, Natural History and Evolution J. C. Avise, 2012-12-06 Molecular approaches have opened new windows on a host of ecological and evolutionary disciplines ranging from population genetics and behavioral ecology to conservation biology and systematics *Molecular Markers Natural History and Evolution* summarizes the multi faceted discoveries about organisms in nature that have stemmed from analyses of genetic markers provided by polymorphic proteins and DNAs The first part of the book introduces rationales for the use of molecular markers provides a history of molecular phylogenetics and describes a wide variety of laboratory methods and interpretative tools in the field The second and major portion of the book provides a cornucopia of biological applications for molecular markers organized along a scale from micro evolutionary topics such as forensics parentage kinship population structure and intra specific phylogeny to macro evolutionary themes including species relationships and the deeper phylogenetic structure in the tree of life Unlike most prior books in molecular evolution the focus is on organismal natural history and evolution with the macromolecules being the means rather than the ends of scientific inquiry Written as an intellectual stimulus for the advanced undergraduate graduate student or the practicing biologist desiring a wellspring of research ideas at the interface of molecular and organismal biology this book presents material in a manner that is both technically straightforward yet rich with concepts and with empirical examples from the world of nature

Electrophoretic and Isoelectric Focusing Techniques in Fisheries Management Donald H. Whitmore, 1990-09-24 Probably the most ubiquitous biochemical method used today for examining the genetics of individuals populations or phylogenetic relationships between taxa is electrophoresis This book has been created to offer a viewpoint regarding current electrophoretic separation methodologies of macromolecules and their major applications to fisheries management The chapters in this book have been selected and organized into three sections to create a carefully blended mixture of methodologies and applications designed to educate the novice as well as stimulate interest in professional researchers currently using electrophoresis for their work The first section includes chapters that discuss the principles that explain the genetic basis of multiple molecular forms of proteins the theory and practice of DNA analyses and the methodology of electrophoretic separation of these macromolecules starch gel electrophoresis as the predominant

electrophoretic tool for fisheries genetics and protein isoelectric focusing and DNA analysis The second section describes a variety of applications for electrophoretic techniques The third section presents a discussion and results of experiments conducted by Dennis Powers and his associates regarding the physiological significance of multiple forms of enzymes using the fish *Fundulus heteroclitus* as a model system The book features a catalog of nearly 100 enzyme staining recipes and covers new areas in electrophoretic work such as DNA fingerprinting genetic tags mitochondrial DNA methodologies and genomic manipulation of fish stocks This book will provide a useful reference resource for fisheries biologists at federal state and local levels fisheries researchers at universities and students pursuing degrees involving research in fish genetics

The Genetic Structure of Chinook and Coho Salmon Populations in California, with a Note on the Genetic Variability in Sturgeon (Acipenseridae). Devin Michael Bartley, 1987 Populations of chinook *Oncorhynchus tshawytscha* and coho salmon *O kisutch* from Northern California and four species of North American sturgeon were analyzed by horizontal starch gel electrophoresis The products of 53 gene loci from 27 enzyme systems were used to characterize the genetic structure of 35 groups of hatchery and wild chinook salmon The distribution of specific alleles cluster analysis based on genetic identities analyses of gene flow and gene diversity analyses indicated that groups of chinook salmon from the three major river drainages in California were genetically differentiated The products of 45 gene loci from 21 enzyme systems were used to characterize the genetic structure of 27 groups of coho salmon Most of the observed genetic variation was due to rare alleles occurring in only a few groups of salmon No obvious association of specific alleles with geographic area was observed and the low level of genetic variability made patterns of genetic structure or associations among the groups of coho salmon difficult to determine The application of biochemical genetic analyses to the management of chinook and coho salmon fisheries was addressed A comparison of hatchery groups of chinook and coho salmon with wild groups in the same area revealed that hatchery stocks generally reflect the genetic structure of the local populations The genetic differentiation of chinook salmon by drainage could provide fishery scientists with a means to identify specific groups of chinook salmon The application of this technique to manage coho salmon populations is problematic at the present given the seemingly random distribution of alleles and the low levels of genetic variability The products of seven gene loci were used to identify hybridization between chinook and coho salmon in a collection of salmon from a tributary to the Trinity River The implications of a group of hybrid fish in the wild were discussed in terms of genetic resource conservation and disease transmission The products of 20 gene loci were used to characterize the genetic structure and relationship of four species of sturgeon *Acipenser transmontanus* *A. medirostris* *A. fulvescens* and *A. brevirostrum* Fixed allelic differences existed among the four species at several gene loci and each species could be unambiguously identified by its genetic profile **New Zealand Journal of Zoology**, 1977-08 *The Biochemical Journal*, 1929 Vols 36 include Proceedings of the Biochemical Society **Readers' Guide to Periodical Literature** Anna Lorraine Guthrie, 1915 An author subject index to selected general
