I- Solve the following problem:

1. Having freckles is dominant (F) over not having freckles (f), attached earlobes is dominant (A) over non-attached earlobes (a). Jay is homozygous dominant for freckles and heterozygous for attached earlobes. Angel is heterozygous for freckles and is homozygous for attached earlobes. **(Show your solution) 10 points.**

A. What is the genotype of Jay?

-FF, Aa

B. What is the genotype of Angel?

-Ff, AA

C. What are the genotypes and phenotypes of their children?

Non-Standard Computation Tino Gramß,1998-07-08 There s never enough computer power for challenging questions

Problems such as the design of turbines consisting of more than 100 parts or the simulation of systems of some 50 interacting particles are far beyond today's computer capacities. Or how to find the shortest phone line connecting 100 given cities. The most promising answers to such questions come from unconventional technologies. The massive parallelism of molecular computers or the ingenious use of quantum systems by universal quantum computers provide solutions to the dilemma. And as for the phone line problem, genetic algorithms mimic the way nature found its way from the first cells to today's creatures. While relying on conventional computer hardware, they introduce an element of chance on the software level, thus circumventing the disadvantages of traditional deterministic algorithms. A textbook for those shaping the future of computing, this volume is also pure fun. **Genetics** Peter J. Russell, 1992
