Earth's Atmosphere: Journey Through Earth's Gaseous Shell

The Earth's atmosphere is a dynamic blanket of gases that surrounds our planet, providing the air we breathe and protecting us from the harsh conditions of space. Composed primarily of nitrogen (N₂) and oxygen (O₂), with smaller amounts of other gases such as carbon dioxide (CO₂), water vapor (H₂O), and argon (Ar), the atmosphere plays a vital role in regulating Earth's climate, weather patterns, and temperature. Divided into several layers based on temperature and composition, the atmosphere extends from the Earth's surface to outer space, gradually thinning out and merging with the vacuum of space.

The lowest layer of the atmosphere, the troposphere, extends to an altitude of approximately 10 kilometers (6 miles) above the Earth's surface. It is the layer where most weather phenomena occur, and temperature decreases as altitude increases.

The stratosphere is the second layer above the troposphere, extending from approximately 10 kilometers (6 miles) to 50 kilometers (31 miles) above the Earth's surface. It is characterized by a temperature inversion, where temperature increases with altitude. The ozone layer is located within this layer, absorbing harmful ultraviolet radiation from the Sun.

The mesosphere is the third layer above the stratosphere, extending from approximately 50 kilometers (31 miles) to 85 kilometers (53 miles) above the Earth's surface. It is the layer where most meteoroids burn up, and temperature decreases as altitude increases.

The thermosphere is the fourth layer above the mesosphere, extending from approximately 85 kilometers (53 miles) to 600 kilometers (373 miles) above the Earth's surface. It is the layer where the aurora borealis and aurora australis occur, and temperature increases as altitude increases.

The exosphere is the outermost layer of the atmosphere, extending from approximately 600 kilometers (373 miles) to 10,000 kilometers (6,214 miles) above the Earth's surface. It is the layer where the atmosphere merges with the vacuum of space.
